WHY IS YOUR HOME BUILT OF WOOD

BECAUSE WOOD IS --

STRONG—Weight for weight it is stronger than any other building material.
DURABLE—Properly used, it lasts for generations.
EASILY WORKED—It is shaped and joined with simple tools.
IMPERVIOUS—Neither wind nor water will go through it.
A NON-CONDUCTOR OF HEAT—It is warm in winter and cool in summer.

ATTRACTIVE—For interior finish, wood is unrivalled in its soft coloring and beauty.
WHOLESGOME—Wood is a safe, healthful, not noisy, and is of pleasing and friendly appearance.
CHEAP—Abundant, accessible, easily handled, manufactured, and erected, wood is the cheapest of all building materials.

THESE QUALITIES ALSO MAKE WOOD THE BEST MATERIAL FOR BARN AND OTHER FARM BUILDINGS

FARM BUILDING PLANS.

The British Columbia Forest Service is publishing a series of bulletins on farm buildings, the plans for which, the bills of material, and instructions how to build were prepared by the College of Agriculture of the University of Saskatchewan. The Forest Service has supplied information concerning the best woods to use.

Any of the following bulletins in which you are interested will be mailed free on application to the Chief Forester, Victoria, B.C. Complete reference sets will also be supplied lumber dealers on request.

Forty-Mile Rural Municipality.

Ratepayers Notified that Taxes Must be Paid.

Proceedings of Council of Rural Municipality of Forty Mile No. 84 on December 6th.

Meeting called to order by Reeve Walker.

Councillors present—Messrs Walker, Halverson, Neil and Hanna.

Minutes read and approved.

The following bills were allowed:—C. Zweigle, cutting weeds on road, \$15.00.

F. R. Rford, services as weed inspector, \$12.62.

Christie Book Store, election supplies \$9.80.

Bow Island Review, printing \$14.24.

Arthur Neil, cutting weeds on east half 188-10, \$34.00.

Jas. R. Smeaser, auditing, \$20.60.

Balman S.D. \$100.

Bansinger S.D. \$150.

Sampson S.D. \$120.

Brownvale S.D. \$100.

Chin Conner S.D. \$100.

Hayward S.D. \$100.

Motion by Councillor Hanna that we have the appointments of tax collectors until next meeting and that the secretary be instructed to notify all those in arrears of taxes, that they will be given until December 31st, to pay or after that date seizure will be made.—Carried.

Motion of adjournment to meet at Westall at 8 a.m. on December 18th.

Carried.

Nomination was held from 2 p.m. to 4 p.m.

The following candidates were nominated.

Division No. 1.—Geo. Milroy, (Acclamation).

Division No. 2.—Thos. H. Walker, (Acclamation).

Division No. 3.—A. J. Halverson, (Acclamation).

Division No. 4.—Jan. Neil, (Acclamation).

Rural Elections.

No Excitement at Forty-Mile.

The whole of the Councilors for the Rural Municipality of Forty Mile, with the bare exception of I. N. Anon, who, we believe is leaving the district, were last week elected by acclamation. By permitting this procedure to be adopted, the electors have shown their unqualified approval of the work done by their representatives during the past year, and could not have shown their appreciation in a better form. The Councilors are now—Geo. Milroy, Thos. H. Walker, A. J. Halverson, Jas. Neil and S. M. Hanna.

For district No. 6 no candidate was nominated and probably the electors for Municipal Affairs for the province will be requested to appoint a resident to fill the vacancy now existing.

An Election at Bow Island, but Voting is Quiet.

In the Rural Municipality of Bow Island, voting on Monday was quiet, but a small percentage of the total vote visited the polls. It was thought probably a much greater interest would be taken this year, but apparently the farmers are too busy to get enthused over the election. Whereas last year sixty-one voters were polled, this year only fifty-one were recorded.

The result of the day's poll was as follows:—

Geo. Poole, 1-10-12 31

A. Gragg, 10-10-15 49

R. B. Clark, 11-12 40

P. J. Henderson, 28-10-11 42

J. Pollitt, 25-11-11 48

W. R. DePew, 17-11-10 36

N. F. Edmond, (defeated) 35

The present Council comprises—Henderson, Gragg, DePew, Clark, Clark and Stevenson. One of the old Council, therefore, are elected for another term.

Darlington Satisfied with Old Council.

Councillors of Darlington Municipality were elected by acclamation as follows:—A. J. Donahue, J. Sattin, P. E. Baker, T. Frankish elected, D. L. Powell, one to be appointed.

Local & General.

Gathered from Various Sources.

Why is your home built of wood? Read the answer in the advertisement on the front page. Quite a number of people from Bow Island are sending for these bulletins.

A. B. Page of Prosper left last night for Salem, Oregon, where his wife and part of his family have been staying for some time. Mr. Page will return sometime next spring.

An advertisement in this issue announces that the three townships of Nemesis, Elkton and Pakowasa of the Western line of the C.P.R., will be sold on Tuesday, January 4th.

We hear that Bigelow and Fletcher of Burdett have dissolved partnership, the latter remaining in possession. Mr. Bigelow, we believe, contemplates going into business somewhere up north.

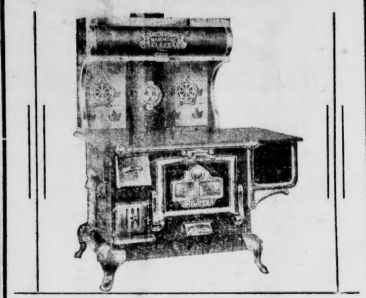

A union Christmas tree entertainment will take place in the I.O.O.F. hall on Thursday, December 23rd. An excellent program is being arranged, and a very enjoyable evening will no doubt, be the result.

Mr. and Mrs. P. W. Taylor are leaving on Monday next to spend Christmas with friends in North Dakota, and will afterwards visit other joints previous to returning home.

J. W. Pullman returned home on Monday from a visit to Vancouver, where he had been looking after his property. Mr. Pullman says conditions could not very well be worse, and he expressed himself as being more than delighted in getting back to Bow Island.

Merry Xmas.

Patriotic Burdett

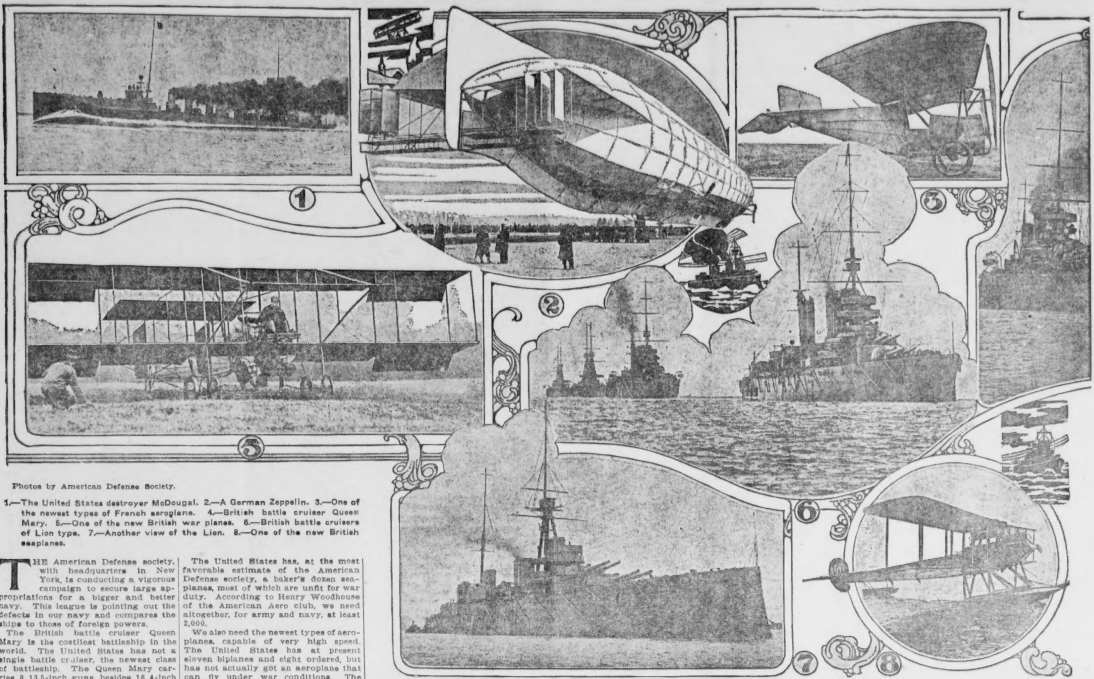

Committee Carries Country in Aid of the Patriotic Fund.

Not many of the towns along the Crow have shown such a patriotic spirit as Burdett, where a number of the residents have taken the matter of the Patriotic Fund up in earnest, there by a showing a splendid example to some of the other towns. Messrs. Robinson, Mercer, Colman and Campbell were out canvassing for subscriptions on Sunday last, visiting the outlying portions of the district, and they met with a generous response from the patriotic members of the community, but as part of the territory covered mainly composed of the German element was decidedly averse to contributing to such a fund, the response here was practically nil. One feature which was witnessed contained several lumpy and preposterous looking Germans. One of them put up the excuse for not contributing: "Let them who started the war look after the dependents." Anyway he was going to the States for a holiday and didn't give anything.

The Bow Island Hardware Co. is now displaying some very nice silverware just the thing for a Christmas present. In addition, there has also arrived a splendid line of hostess, ranges, etc. Altogether, F. W. Brown has certainly done his part in solving the Christmas present problem.

R. S. Beattie leaves tomorrow night on a visit to his home in Vancouver, N.S., to spend the Christmas holidays. He will return in about five or six weeks' time, and we are told that in all probability he will not return unaccompanied. Roy himself remains very quiet on the subject, which is as he is a very capable

Entire Nation Interested For Bigger and Better Navy

Photos by American Defense Society.

1.—The United States destroyer McDougal. 2.—A German Zeppelin. 3.—One of the newest types of French aeroplanes. 4.—British battle cruiser Queen Mary. 5.—One of the new British war planes. 6.—British battle cruiser of Lion type. 7.—Another view of the Lion. 8.—One of the new British aeroplanes.

THE American Defense society, with headquarters in New York, is conducting a vigorous campaign to secure large appropriations for a bigger and better navy. This league is pointing out the defects in our navy and comparing the ships to those of foreign powers.

The British battle cruiser Queen Mary is the costliest battleship in the world. The United States has not a single battle cruiser, the newest class of battleship. The Queen Mary carries a 13.5-inch gun, has 16-inch guns, and can develop a speed of nearly thirty knots an hour, depending rather on speed than armor. Japan owns four ships of this type, "one of these powerful ships," writes Henry Neustadt, "would in one sweep crush our entire Pacific fleet, destroy our military depots at Olongapo, in the Philippines, cross the sea and raid every unprotected city on the Pacific coast from Sitka to San Diego, meanwhile calling in our own ports, and nothing of ours could operate or destroy it."

The United States has, at the most favorable estimate of the American Defense society, a baker's dozen aeroplanes, most of which are unfit for war duty. According to Henry Woodhouse of the American Aero club, we need altogether, for army and navy, at least 1,000.

We also need the newest types of aeroplanes, capable of very high speed. The United States has at present eleven biplanes and eight ordered, but has not actually got an aeroplane that can fly under war conditions. The French had about 1,500 at the outbreak of the war, the English and Germans about as many. Altogether, including aeroplanes, we have less than twenty, according to the American Defense society.

A German Zeppelin photographed at Berlin field before the outbreak of the war is shown above. This is the type which has been raiding London and the English coast. The United States has one dirigible now under construction for purposes of military use.

The Atlantic torpedo flotilla is the most war ready unit of our navy. We have forty modern destroyers, but, according to recommendations of the general board of the navy, we should have 125, or four for each battleship.

For the first time in the history of the country when not actually confronted by war, as was the case in 1903, army and navy experts have apparently adopted the policy of presenting to congress the actual needs of the service, as demonstrated by the present war.

In last years the general board of the navy has made its report—and, on the whole, a consistent report—and the secretary of the navy has thereupon, with the advice of political leaders in the senate and house of representatives, decided upon just how little the country would accept. It frequently happened that these recommendations of the secretary, themselves a modification of the general board recommendations,

were still further curtailed in congress until today both army and navy are in the appalling state of unpreparedness which has so roused the whole country.

Today, according to all expert naval opinion, the United States needs forty-eight dreadnaughts to enable it to fulfill its naval obligations, to protect its commerce and to repel an enemy. We have but seven such ships actually in commission, with seven more building or authorized. The composition of a naval fleet is not a matter of guesswork. Every class of ship has been closely studied, and the number of every class of ship necessary to make an efficient fleet has been accurately determined. This every dreadnaught should be protected by four swift torpedo boat destroyers. A total of forty-eight dreadnaughts involves the building of 192 destroyers. We have at present only four.

Our navy is without battle cruisers and scouts. On going into battle it would be exactly in the position of a man who undertakes to fight an opponent blindfolded. We accordingly need a flotilla of at least six swift battle cruisers carrying in their main batteries guns of the highest caliber. We also need scout cruisers of the lightest and swiftest type to discover the enemy's whereabouts in time of need.

The submarine, as an engine of war has not yet been satisfactorily tested out. The success of the German submarine, which for so long time filled the public mind, was mainly against merchantmen. It, of course, goes with

out saying that on some account or chance upon the English merchant fleet could have been accomplished by any speedy warship without half of the danger and expense of a submarine had Germany been able to get her war fleet upon the North sea. Still, it is not to be questioned that an adequate fleet of seagoing submarines should be provided for the American navy. We have no submarine in commission yet of the seagoing type, although ten are building or authorized.

We have about 50,000 mobile troops in the United States scattered around in a number of army posts. The annual appropriation for the needs of the army is \$120,000,000, and the total recruiting strength is a little short of the authorized legal limit of 130,000 men. This makes the annual cost of every soldier in the United States army a little over \$1.50. The annual cost of every soldier in the Swiss army is \$10.50.

Is Your Dining Room Pretty?

A LAMON dining room is not necessarily so do not be discontented with your small one. If possible, make it a gay, attractive place, with light walls, china hangers, painted furniture, plants and light chime of an individual color. A dining room should never be gloomy. Its charm will disappear. If you want to have a dining room which will turn into a dance drop-out!

SLIDE AT CANAL WILL IMPROVE THE WATERWAY

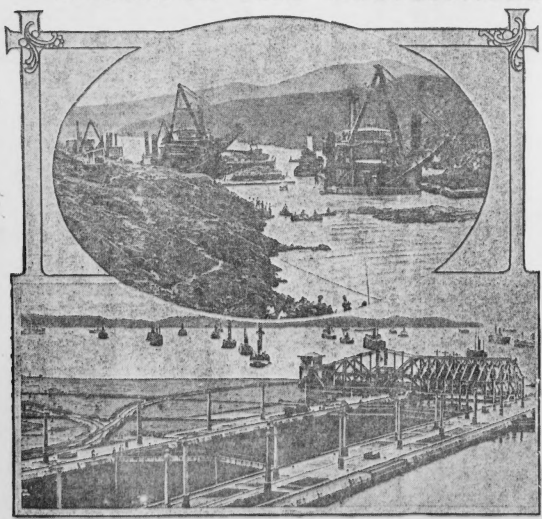

Photo by American Press Association.

Latest Slide in Panama Canal and Ships Waiting to Pass Through.

THE great slide to Gallard cut of the Panama canal, which has choked that part of the great isthmian waterway with millions of cubic yards of rock and dirt until the channel is only about twenty-five feet in width, while the depth has been reduced from forty to ten feet, is now being cleared out to a varying depth of from three to fifteen feet, was clearly foreseen as long ago as October of last year.

For months before the sudden plunging of the great mass into the canal, General Goussier, governor of the canal zone, and his associates worked day and night keeping the channel clear, their calculations being such that had the slide continued in its slow steady engineering effort it would have been able to free the threatened part of the cut as fast as the rock and mud came in.

This statement was made by Brig-

dier General H. F. Hodges, U. S. A., who until his promotion to his present rank last year was assistant chief engineer of the canal and who knows the canal and the situation caused as a result of the great slide, talked of the problem confronting General Goussier. For the benefit of the pessimists it

can be stated that instead of irreparably damaging the canal the great slide will in the end make the canal a safer watercourse, and when it is removed the danger of a recurrence will to a great extent have been eliminated. "What has happened," said General Hodges, "was clearly foreseen as far back as October of last year—that is, we saw that the mass was slowly moving into the prism. It was of course impossible to foresee that it would be so suddenly dislodged and plunge in its entirety into the cut, blocking it to traffic and causing the great slump."

"When it was discovered that the rock and earth involved in the slide were moving the most powerful of dredges were put to work removing the rock and other material as fast as it came into the threatened part of the cut. All went well, and the dredges were able to keep the channel comparatively free until the early part of September the mass of sliding material suddenly began to move so fast that the block followed. Unfortunately it came with a rush, and the dredges were entirely unable to cope with the situation. The result is what the world has since learned, and the problem now is to get it out. You may rest assured the problem will be successfully worked out and the canal, when it is again clear, will be a better canal than it ever was before."

"About 10,000,000 cubic yards of material were involved in the slide. The fact that it was in motion was, as I have stated, known to the canal engineers since October of last year. For months until the sudden rush of September, the movement was very slow. That it was moving could be detected by the dropping particles. The east side of the slide is north of what is known as Gold hill and north of Contractors hill on the west, a part of the western area being the site of the old village of Chabre, now occupied by a part of the Panama canal garrison and known as Camp Gallard. "Since Sept. 20 until the present time the slide has been in continuous motion, the length of the channel obstructed being about 1,300 feet. The width at the worst point has been reduced to about twenty-five feet and the depth to between three and fifteen feet. The finished width of the channel at the point where the trouble is will be 100 feet and the depth forty-five feet. These figures indicate the size of the problem confronting General Goussier and his men."

FIND CAUSE OF PELLAGRA.

To prove the contentions of Dr. Joseph Goldberger, a surgeon in the United States public health service, that pellagra is caused by a diet deficient in certain carbohydrates to the exclusion of protein, the Mississippi state penitentiary seven miles ago volunteered to be placed on this kind of a diet absolutely. State health officers now announce that six of the men developed pellagra, and that two others showed symptoms.

The Farm Girl's Opportunity

Practical Demonstration That a Woman Can Make a Success of Farming

In a talk with the farm girl James H. Hill says:

A young woman who applies herself to the study of what farming really is and goes at it with the same intelligence as could give to school learning has a reasonable chance of success. It is gratifying to me to see that many young women are coming to the agricultural schools with this realization of this, for we find them in the farm tracks and meeting some of the hardihood and spirit of the men, and even of the women, of the old-time pioneers who were the backbone of the western enterprise whose fruit is to be cultivated, and the sheep and cattle are to follow.

No city in the world can be so progressive unless the farms are. When you contemplate turning your back on the farm to enter upon a life you do not understand you are putting away from yourself a part of you, to say nothing of the lost contentment and freedom of life.

The study of the chemical properties of various soils is one of the best pursuits a young woman can take. Mr. Hill then tells this experience of a farmer's daughter in a northwest state.

She had assumed to become a practical farmer. Receiving her agricultural education, she formed the acquaintance of a farmer who had the wisdom to point out to her the errors in value of the crops she was growing. Her teacher gave her elementary and advanced book-keeping, and she had her address various farm accounting the same way.

She then stepped by step, as the girl gained the information she desired, she began to get more and more of her ground, and finally felt that she could take the farm over her father and mother.

She asked them to give her control of a certain acre crop each year, and the farm tract had been divided into three parts. She asked if she might use some of her own ideas upon this acreage and was told that she might. She was not, however, had never been properly placed, and after several, the soil was not given it.

It had yielded thirty-one bushels of corn to the acre, and one season, fifty bushels of corn to the acre. The soil had been permitted to "rest" at the end of the year, and the acreage was expected to be increasing in value. The girl believed the soil was not in the best condition for growing corn.

She was taking a farmhand, the girl believed the soil was not in the best condition for growing corn. She was taking a farmhand, the girl believed the soil was not in the best condition for growing corn.

Dominion Report on Canadian Crops

Potato Production Comparatively Poor and Decrease in Acreage Sown

The census and statistics office has issued a report on the yield, quality and price of the best and poorest crops of 1912, the acreage and condition in October 21 of fall wheat crops for 1912, and the progress of fall plowing.

Root and tuber crops in Canada consisting of potatoes, turnips, manioc, etc., hay and clover, alfalfa, and other crops and sugar beets, were planted in 1912 a total area of about 437,000 acres, as compared with 500,000 acres in 1911, and their respective yields were:

Potatoes, 12,570,000 bushels, as compared with 12,770,000 last year. The decrease in area is probably in respect to beet and clover, and the increase in value is due to the larger yield of the same crop. Hay and clover yield 10,520,000 tons from 733,000 acres, or 1.5 tons per acre, as compared with 10,200,000 tons from 707,000 acres, or 1.5 tons per acre last year.

The yield of alfalfa, 1,203,000 tons from 22,800 acres, or 5.2 tons per acre, of clover, 1,203,000 tons from 22,800 acres, or 5.2 tons per acre, of alfalfa, 1,203,000 tons from 22,800 acres, or 5.2 tons per acre.

The total estimated yield of potatoes has this year been 12,570,000 bushels, as compared with 12,770,000 last year. The decrease in area is probably in respect to beet and clover, and the increase in value is due to the larger yield of the same crop.

The total estimated yield of potatoes has this year been 12,570,000 bushels, as compared with 12,770,000 last year. The decrease in area is probably in respect to beet and clover, and the increase in value is due to the larger yield of the same crop.

The total estimated yield of potatoes has this year been 12,570,000 bushels, as compared with 12,770,000 last year. The decrease in area is probably in respect to beet and clover, and the increase in value is due to the larger yield of the same crop.

Work on Aeroplanes

The Airman's Chief Work is Not Dropping Bombs

When we read the airman's work on their experiences during the present war, we learn that the chief purpose of most of their flights is not to drop bombs or to attack the enemy, but rather to aid their own aircraft in directing their fire. The airman is often sent up at the order of the commander of a battery, to ascertain whether the guns are overhauling the mark, or not ready, or are too far to right or left, or if it is imperative that he be able to communicate his information without instantaneously, and some very ingenious methods of doing it to the earth have been devised.

Telephone systems are used for such purposes. The airman is often sent up at the order of the commander of a battery, to ascertain whether the guns are overhauling the mark, or not ready, or are too far to right or left, or if it is imperative that he be able to communicate his information without instantaneously, and some very ingenious methods of doing it to the earth have been devised.

The French are using a very ingenious method of signalling by means of a sort of lantern. An apparatus fitted with lamp-like lenses near the hand of the airman, and a series of lights in a lever some of this sort passes down a pipe and is discharged into the air in a black cloud. The pipe is in a de-rotating position, and the light may be small or large. The operator can spell out the Morse telegraphic code in the air, and the ground crew can read from earth.

The German have adopted what they consider a far more practical method of communicating. They have invented a system of signal lamps, which permits the airman to send his message and also to receive instantaneously the day time, as well as at night. The apparatus is regulated so that the operator may send a long or short flash, thus utilizing the Morse code, any other code which may have been agreed upon.

When a message is to be sent the operator directs a telescope beam of light to the ground crew, who reflect the beam back to the airman. In both systems, the light is reflected by the ground crew, who reflect the beam back to the airman. In both systems, the light is reflected by the ground crew, who reflect the beam back to the airman.

When a message is to be sent the operator directs a telescope beam of light to the ground crew, who reflect the beam back to the airman. In both systems, the light is reflected by the ground crew, who reflect the beam back to the airman. In both systems, the light is reflected by the ground crew, who reflect the beam back to the airman.

How She Classified Him

Mrs. Atkins, dissatisfied with the number of times one man came to see her, wrote him a letter.

"When I engaged you, Martha," she wrote, "you said you were a friend. Now whenever I come into the kitchen I find the same man."

"You're so main," said Martha, "at least you're not on your mind. 'No friend?' Then who is he?" "He's my husband."

"You're so main," said Martha, "at least you're not on your mind. 'No friend?' Then who is he?" "He's my husband."

"You're so main," said Martha, "at least you're not on your mind. 'No friend?' Then who is he?" "He's my husband."

"You're so main," said Martha, "at least you're not on your mind. 'No friend?' Then who is he?" "He's my husband."

"You're so main," said Martha, "at least you're not on your mind. 'No friend?' Then who is he?" "He's my husband."

"You're so main," said Martha, "at least you're not on your mind. 'No friend?' Then who is he?" "He's my husband."

"You're so main," said Martha, "at least you're not on your mind. 'No friend?' Then who is he?" "He's my husband."

BUILDING PLANS FOR HOUSES AND BARN

Designed for Farmers of Western Canada

We are very pleased to be able to offer you patterns during the coming winter months a series of interesting plans of building, the most economical method of doing so, to which you will be assured of getting a thoroughly warm and satisfactory home.

These articles will deal in detail with the various parts of a house. Starting with the basement or cellar, taking the first and second stories, with each room in detail, a whole chapter can be written on every room or any room of a house, whether big or small. The construction of the walls, roof, modern ventilation, installation of sanitary appliances, the construction of a building so as to reduce fire hazard.

These articles will be furnished by The Designer, and a complete book of plans of houses, etc., can be secured by writing them, care of Toronto Type Foundry Co., Ltd., Winnipeg.

Poultry Farming

More Failures Attributable to Lack of Experience Than Anything Else

The writer heard a well known agricultural authority remark that the "back to the land" movement occurred in thirty-five-year cycles, and that it was now due to see many city dwellers moving back to the farms. Should this be the case, the advice from the Grain Growers' Guide to people contemplating poultry farming proves very timely:

"While it would be in vain to at-
